**Subject: WX System recommendation.**

During the last 9 of my 45 years as an employee of the Danish Civil Aviation Administration the main part of my work consisted of maintaining the existing as well as constructing new PANS-OPS procedures for the airports of Denmark, the Faroe Islands and Greenland.

In order to expedite this work we decided to buy the initial version of the Wavionix program, that was marketed in 1994. The program has been through quite an evolution since the early efforts, and most of the improvements have been introduced as a consequence of feed-back from the buyers.

While I worked for the CAA, there was a great appreciation of the help the WPD software provided to the designer of the procedures in taking out much of the tedious work by automating calculations and turning these into the required lines and curves on the drawing.

I retired from the CAA in October 2003.

Since 1999 – initially in parallel with working for the CAA – I have been running my own company, which provides consultancy primarily within the realms of PANS-OPS. This has led to exciting work in a variety of places – so far primarily in different parts of Europe and the Middle East. Based on my experiences with WPD from my time with the CAA, I decided to acquire a licence for the program to be used by my company.

In my view, using WX Systems software greatly increases productivity. I have been a user for 10 years and I much appreciate the way WX Systems listens to suggestions etc. from the users. I have always felt that my views counted in the way the program has been evolved over the years.

Yours sincerely

Lars Finken  
Director
